

# Errata for “Hoare-Style Verification of Graph Programs”

Chris Poskitt

April 20, 2012

This document lists any technical or typographical errors discovered in the paper “Hoare-Style Verification of Graph Programs” as it appeared in *Fundamenta Informaticae*, volume 118(1-2). The PDF version of the paper on my personal website and my research group’s website is the latest version, with all errors mentioned here corrected.

Please get in touch (via [cposkitt@cs.york.ac.uk](mailto:cposkitt@cs.york.ac.uk)) if you spot anything else.

## Errata

### 19 April 2012

- *Page 161.* A normalisation step (that E-constraints are labelled by sequences of distinct variables) was not stated in Proposition 7.2. This has been added (plus a brief explanation that generality is not lost) to the latest version of the paper.
- *Page 164.* The same normalisation step was missing from Lemma 7.5 (which is a generalisation of Proposition 7.2, above). This has been added to the latest version of the paper.
